— THE MAC TOOLKIT, REUNITED

94 Mac tools. One notch away.

A private, all-in-one toolkit for the Mac: 94 local tools and a notch that earns its keep. One payment, no uploads, no subscription.

THE PROBLEM

Everyday Mac work is death by a thousand apps.

01

Fragmentation

Convert an image, compress a PDF, rename a batch, trim a clip: four tasks, four apps, four interfaces, four learning curves.

02

Subscription fatigue

Each utility wants $5–$15 a month for a feature used once a week. The bills add up faster than the value does.

03

Privacy risk

Free online converters are the default, and they ask users to upload contracts, IDs and client media to someone else's server.

04

Dead space

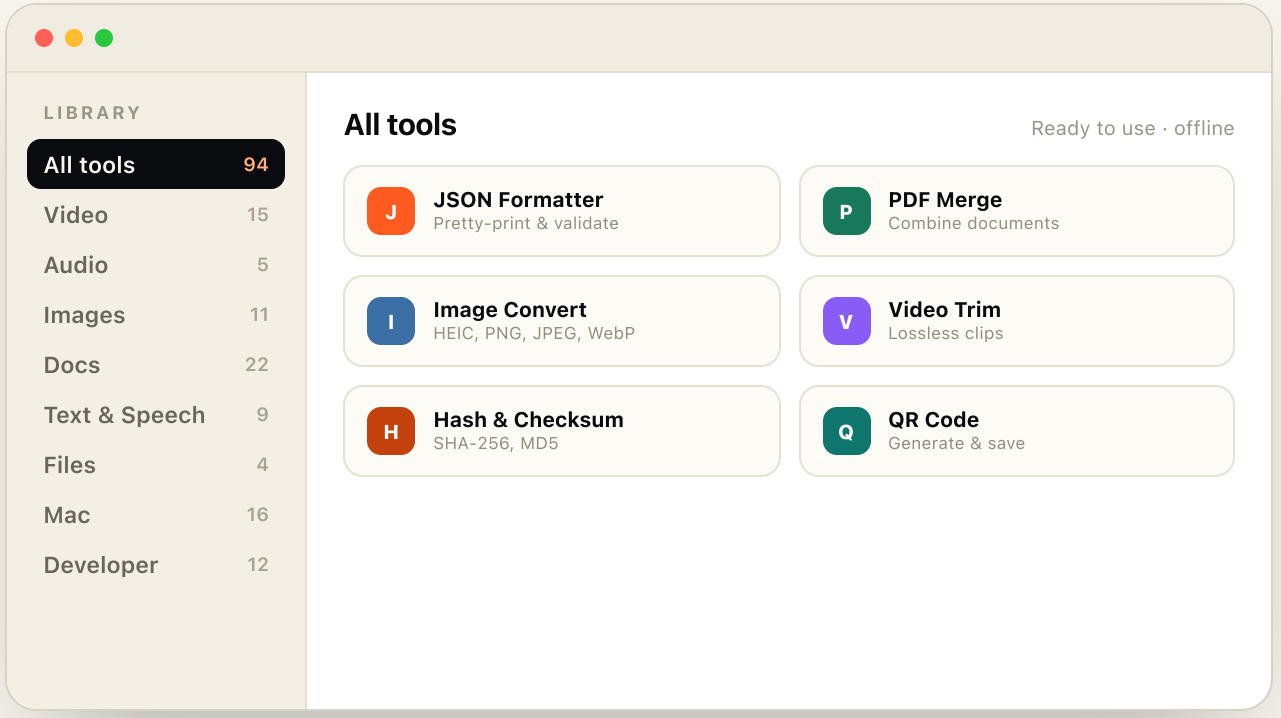

The notch sits unused while windows, menu bar icons and Dock tiles multiply around it.

Users pay three times — in money, in time, and in trust.

THE SOLUTION

One native app. 94 tools. Zero uploads.

- **Local by design**
  Every tool runs on Apple frameworks — PDFKit, AVFoundation, Core Image, Speech — not on a server.
- **Safe by default**
  Results land in dated folders. Originals are never overwritten without confirmation.
- **One catalogue**
  A single source of truth drives the app, the storefront, the tool pages and the sitemap.
- **Always one gesture away**
  The notch overlay surfaces tools and live modules without breaking focus.

THE PRODUCT

Ninety-four finished tools, not ninety-four placeholders.

15 tools

Video

Convert, trim, mute, extract audio, inspect media.

5 tools

Audio

Record, convert, inspect and normalise.

11 tools

Images

Convert, resize, compress, rotate, strip metadata.

22 tools

Docs

Merge, split, compress, PDF to images and back.

9 tools

Text & Speech

Count, convert case, extract, speak, transcribe.

4 tools

Files

QR codes, batch rename, zip and unzip.

16 tools

Mac

Keep awake, eject disks, battery, storage, speed test.

12 tools

Developer

JSON, Base64, hashes, JWT, timestamps, diffs, regex.

94 of 94 tools have real screens. Add one entry to the catalogue and the app, site, tool pages and sitemap update together.

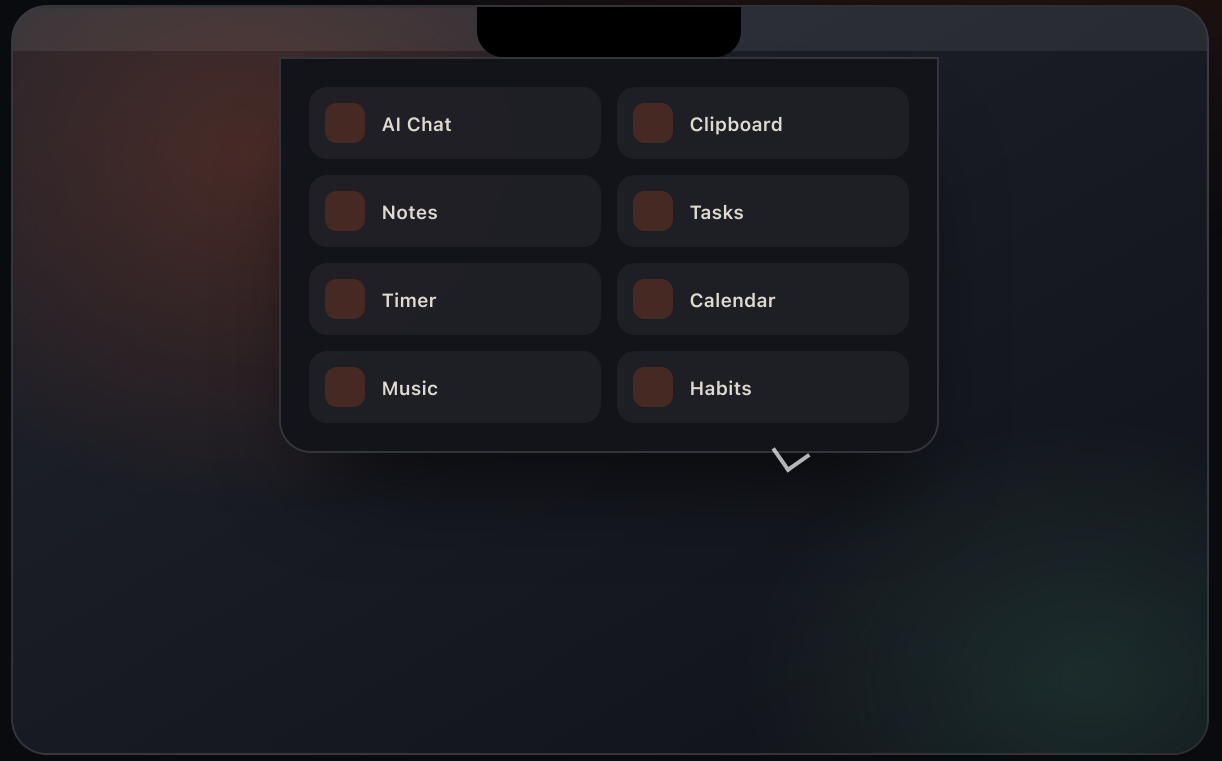

THE NOTCH

The dead space at the top becomes the fastest surface.

The notch is a non-activating panel: it opens over whatever you are doing and stays out of screen recordings. Ten modules are live; fourteen more are on the roadmap.

AI Chat · Clipboard · Notes · Tasks · Timers · Calendar · Music · Hydration · Breathe · Habits · Dictation · Rewrite · Snippets · Shelf · Teleprompter · Revenue · Analytics

Private AI runs on Apple Intelligence, or any local Ollama / OpenAI-compatible server. Prompts never leave the Mac or local network.

WHY NOW

Four shifts make this the right moment.

01

On-device AI is useful

Apple Intelligence and local models made private assistance practical. Nookit can offer AI without shipping prompts to a vendor.

02

Subscriptions are unpopular

Users actively look for one-time alternatives to the monthly bundle. “Buy it once” is a feature again.

03

Privacy is a buying criterion

Uploading client files to a free converter is no longer acceptable in studios, clinics, legal and finance work.

04

Apple silicon is fast enough

Media encoding, PDF rendering and image work that once needed a server now finish on the laptop, instantly.

THE CUSTOMER

People whose job is handling other people's files.

01

Primary: the Mac power user

Freelancers, designers, developers, consultants and students who use a MacBook as their main machine and touch media, PDFs and files every day. They already pay for four to seven single-purpose apps and resent it.

02

Secondary: small teams and education

Studios, agencies, clinics and schools of 2–20 people that want a standard local utility set without per-seat SaaS billing or a data-processing agreement.

WHERE THEY ALREADY ARE

- **Mac communities** — Reddit, MacRumors, Hacker News, designer and developer Slacks.
- **Productivity newsletters** — the same channels that sell one-time Mac utilities today.
- **Search** — 94 tool pages that answer “how do I merge a PDF on Mac” without an upload.
- **Creator reviews** — Mac YouTube and podcast coverage of indie utilities.

The wedge: one person can replace four apps and one subscription in a single $29 purchase.

BUSINESS MODEL

Buy it once. Use it for years.

Perpetual licences, sized by how many Macs a person owns. Every tier unlocks all 94 tools and every notch module as it lands.

1 MAC

$19 once

The everyday licence.

List $49.99

MOST POPULAR

3 MACS

$29 once

Laptop, desktop and the spare.

List $79.99

5 MACS

$39 once

The whole household.

List $119.99

- **Lifetime updates** included with every licence.
- **Offline after activation** — no per-user server cost.
- **14-day refund** , no interrogation and no lock-in.
- **Team licences** quoted by email; education bundles planned.

FUTURE LEVERS

Paid major upgrades · Volume licences · Regional pricing · Education bundles

COMPETITION

Everyone solves a slice. Nobody owns the whole job.

	NOOKIT	SETAPP	RAYCAST / ALFRED	NOTCH APPS	SINGLE-PURPOSE APPS	ONLINE CONVERTERS
Price model	**One-time $19–39**	Monthly bundle	Free + subscription	One-time or sub	Paid per app	Free / ads
Scope	**94 tools + 24 modules**	250+ separate apps	Commands & extensions	5–10 features	One job each	One format each
Local & private	**Yes**	Mixed	**Yes**	**Yes**	**Yes**	No — uploads
Notch surface	**Yes**	No	No	**Yes**	No	No
One interface	**Yes**	No	Partly	**Yes**	No	No

The difference is the combination: native breadth, local processing, one payment, and a notch that makes it reachable — a bundle in price, a single product in experience.

GO TO MARKET

Start where Macs are, then follow the language.

Primary · United States

Largest Mac installed base, highest willingness to pay for one-time utilities, strongest newsletter and creator reach.

Secondary · UK, Canada, Australia

English-speaking Mac markets where the storefront, USD pricing and support already work without translation.

Third wave · Western Europe + Japan

Strong Mac share and paid-software culture; needs localised pricing and checkout, not a translated app.

Long term · India

Price-sensitive but strong developer and student audiences: purchasing-power pricing and an education licence lead here.

CHANNELS ALREADY BUILT

- **108 prerendered routes** , including 94 tool pages, already indexed and answer-first.
- **Search intent** — “merge PDF on Mac”, “HEIC to PNG”, “JWT decoder” with no upload step.
- **Mac communities and newsletters** — launch where one-time utility buyers already gather.
- **Creator reviews** — hands-on Mac YouTube and podcasts.
- **Education and team outreach** — direct licences for studios and schools.

The storefront is the distribution asset. The catalogue already generates the pages, metadata and sitemap; new tools create new acquisition surfaces at zero marginal cost.

STATUS

Built, honest, and close to the launch line.

94/94	10/24	108	1×
TOOLS WITH REAL SCREENS	NOTCH MODULES LIVE	PRERENDERED ROUTES	PAYMENT, LIFETIME UPDATES

SHIPPED

- Native SwiftUI app compiles and launches; all 94 tools registered and renderable.
- Storefront built with catalogue-driven pricing, tool pages and legal pages.
- Single catalogue generates app, site and metadata in one build step.
- Checkout is env-driven, with an email fallback when unset.

NEXT

- Finish the remaining 14 notch modules.
- Licence activation and update backend.
- Developer ID signing, notarization, DMG hosting.
- Public launch and first paying cohort.

Pre-revenue. The product and storefront are built; licensing, notarization and distribution are the remaining launch blockers. No customer or revenue claims are made here.

THE ASK

Put 94 tools one notch away.

We are looking for early users, distribution partners, and the capital to finish licensing, notarization and the public launch.
